

Remington's Model 700™ EtronX™ Centerfire Rifle:

THE FASTEST, MOST ACCURATE

IGNITION SYSTEM EVER DEVELOPED.

Here's how the Model 700™ EtronX works. The electronic fire control has no moving parts other than the trigger. It's clear to be released. No firing pin is struck this time. Instead, an immobile electrical circuit sends a charge through the system to create a very electronically responsive primer. Closing the bolt on the cartridge establishes contact between the firing pin and the primer. When the trigger is pressed, the electronic circuit sends an electrical pulse through the firing pin directly to the primer. This all hap-

pens in less than the blink of an eye. Ignition is even faster with near zero lock time (.0000027 seconds actually), which virtually eliminates the effects of barrel movement after pulling the trigger. In fact, the bullet exits the barrel of an EtronX rifle before a mechanical firing pin could even hit the primer in a conventional rifle. The system also creates an exceptionally crisp trigger pull with 50% less travel than standard triggers. It's so quick, this cutting-edge system is powered by a single replaceable

nine-volt battery, located in the rifle's butt stock. What's more, a unique light-emitting diode on top of the grip indicates complete system status, including whether the rifle is in FIRE or SAFE mode. Or if a cartridge has been chambered. Or if the battery is low. All the other aspects of an EtronX rifle match that of our famous Model 700 bolt-action rifle. It includes the same features as the revered Model 700 VTR SP, with a stainless-steel action, 20" slender fluted barrel, black synthetic stock and full-length aluminum bedding block.
