Dear Mr. Leek,

Thank you for your inquiry. However we do not modify any firearms back to the bolt lock safety. We also recommend following the 10 commandments of safety including not loading a firearm until you are ready to shoot. The safe use and performance of your firearm depends on correct assembly and routine maintenance, as well as adherence to the "10 Commandments of Firearm Safety." <http://www.remington.com/support/10comm.htm> It is critical that you familiarize yourself with the information in both the owners manual and safety booklet. Whether you are a veteran shooter with a collection of Remington firearms, or a first time shooter, take the time to review this important literature and be certain that you are practicing firearm safety!

If you have any questions, please feel free to contact us at 1-800-243-9700 or 1-877-387-6691.

I'd like to do the reverse of the bolt lock mod for pre 1982 rifles. I'm annoyed by my newer 700's tendency to snag the bolt on a bit of brush when I'm carrying it slung and unknowingly open the chamber ejecting a good cartridge. My chambering is 300 weatherby and it's expensive to lose one of those. Can I get a bolt lock (when on safe) installed, or will this require buying a whole new trigger assembly?
