Dear Mr. Rhea,

Thank you for your inquiry. The 30-06 was originally installed with a bolt-lock, which means you have to put the safety switch on fire before you can open the bolt. We are offering a conversion at a special price if you would like your firearm converted, so that you can open the bolt at anytime with the safety on safe. To view more details regarding this modification, go to:

http://www.remington.com/Safety_Modification_Program/remington_safety.htm

Models produced since around 1987 do not have a bolt lock.

I have a BDL 30-06. The safety locks the bolt and trigger. I have a 7MM ADL and the safety locks the trigger but not the bolt. Is this correct?
