

**Before Loading Make Sure:**

1. The firearm is in good working order.
2. The firearm is pointed in a safe direction.
3. The safety mechanism is in the "S" position. See page 9.
4. The bolt assembly is in the open position. See page 9.
5. There is no percussion cap on the nipple or percussion cap residue on the nipple.
6. The firearm is not already loaded. See page 6.
7. The barrel is free from obstructions. See page 10.
8. The breech plug is seated in the barrel. See pages 10 and 11.
9. The nipple is sealed in the breech plug. See page 11.
10. The flash hole through the nipple is clear.
11. You are wearing ear and eye protection.
12. You are in a place that is safe to shoot.
13. You are using only the correct loading components for this rifle.

**I. LOADING THE POWDER**

**WARNING:** Do not attempt to load the firearm until you have read and understood this book thoroughly and all 13 of the cautions listed here on this page have been read.

1. Using the ramrod with extension handle and cleaning bag, swab the bore to the breech end with a cleaning patch that has been saturated with Remington® All-Natural Bore Clearer to remove any debris or fouling that may have accumulated in the bore while the rifle was in storage.
2. Swab the bore with cleaning patches until the patches come out clean and dry.
3. Swab the bore with a cleaning patch used with Remington Wonder Lubricant for black powder.
4. Point the firearm in a safe direction and fire at least two percussion caps to make sure the flash hole through the nipple is clear and dry. Residual bore cleaner will break down the charcoal powder and increase the possibility of a misfire or hangfire.

**WARNING:** Wait at least one full minute after the last shot is fired before pouring powder into the bore. If you do not wait, you may receive injuries.

5. Place the tip of the rifle on a firm, stable surface with the muzzle pointed up and well away from your body.

**Treat the firearm as if it could go off at any time.**

6. Use an individual powder measure to pour the correct amount of powder into the bore.

**WARNING:** Make sure you are using 26 or 44 grain powder. NEVER USE RS ONLY.

Never use ANY quantity of any other powder.

Never pour powder directly into the mouth from a powder flask or container. A lingering spark could ignite the entire container of powder. Always use an individual charge measure.

Never exceed the maximum charge listed on pages 16 and 17.

**NEVER USE CENTERFIRE POWDER CHARGING EQUIPMENT FOR BLACK POWDER.**

7. Keep the muzzle pointed up and away from your body at all times to keep the powder in the bottom of the barrel and to avoid face and hand injuries.
8. Proceed to load the projectile.

**II. LOADING THE PROJECTILE**

**WARNING:** Do not attempt to load the firearm until you have read and understood this book thoroughly and all 13 of the cautions listed here on this page. MAKE SURE! at the top of this page.

1. Keep the butt of the rifle on a firm, stable surface with the muzzle pointed up and away from your body.
2. If you choose to use a Remington Warbird Wall™ place it evenly on the muzzle so it plugs the entire bore. Push the wall past the bore a short distance with a short scatter.
