

Remington® Model 870™ Pump Action Shotgun

Congratulations on your choice of a Remington®. With proper care, it should give you many years of dependable use and enjoyment. For best results, we recommend that you use Remington Ammunition — the ammunition used in factory testing your firearm against our exacting quality and performance standards.

PICTURE A This picture shows the main parts of a REMINGTON MODEL 870™ PUMP ACTION SHOTGUN. The picture will aid in understanding the instructions in this book.

PICTURE B This picture shows the parts of the ammunition.

Important Parts of the Firearm

The Safety Mechanism

The safety mechanism on the Model 870™ Pump Action Shotgun is a button located behind the trigger, commonly known as a stock bolt safety. See Picture 1.

This safety mechanism provides protection against accidental or unintentional discharge under normal usage when properly engaged in its good working order.

To engage the safety mechanism, push the button so the **RED BAND MARKING CANNOT BE SEEN**.

Always engage the safety mechanism when the firearm is loaded and you do not intend to shoot.

Never pull the trigger when the safety mechanism is engaged.

When you are ready to fire the firearm, press the safety mechanism so that the **RED BAND MARKING IS SHOWING**.

Do not touch the trigger while moving the safety mechanism. Your fingers and all other objects should be kept out of the trigger guard and away from the trigger until you are actually ready to fire by pulling the trigger.

WARNING! The firearm will fire when the trigger is pulled and the **RED BAND MARKING IS SHOWING**.

Even when the safety mechanism is engaged, careless handling can cause the firearm to fire. See *Ten Commandments of Firearm Safety* on page 2.

The Security System

The firearm you have purchased is equipped with an integrated security system. The security system enables the owner to lock the safety mechanism on the firearm in the **"SAFE"** position with the use of a special key.
