

Remington® Model 7400™ Autoloading Centerfire Rifle

Congratulations on your choice of a Remington®. With proper care, it should give you many years of dependable use and enjoyment. For best results, we recommend that you use Remington Ammunition – the ammunition used in factory testing your firearm against our exacting quality and performance standards.

PICTURE 1 This picture shows the main parts of a REMINGTON MODEL 7400™ AUTOLOADING RIFLE. The picture will aid in understanding the instructions in this book.

PICTURE 2 This picture shows the parts of the ammunition.

Important Parts of the Firearm

The Safety Mechanism

The safety mechanism on the Model 7400™ Autoloading Centerfire Rifle is a button located behind the trigger. See Pictures 3 and 4.

The safety mechanism provides protection against accidental or unintentional discharge under normal usage when properly engaged and in good working order.

To engage the safety mechanism, push the button so that the **RED BAND MARKING CANNOT BE SEEN**.

Always engage the safety mechanism when the firearm is loaded and you do not intend to shoot.

Never pull the trigger when the safety mechanism is engaged.

When you are ready to fire the firearm, press the safety mechanism so that the **RED BAND MARKING IS SHOWING**.

Do not touch the trigger while raising the safety mechanism. Your fingers and all other objects should be kept outside of the trigger guard and away from the trigger until you are actually ready to fire by pulling the trigger.

WARNING: The firearm will fire when the trigger is pulled when the **RED BAND IS SHOWING**.

Even when the safety mechanism is engaged, careless handling can cause the firearm to fire. See the *Ten Commandments of Firearm Safety* on page 2.
