

5TH COMMANDMENT

Use Proper Ammunition.

Every firearm is designed to use a certain caliber or gauge of ammunition. Using the wrong ammunition, loading ammunition or using improperly reloaded ammunition can cause serious personal injury or death. If you only takes one cartridge or shotshell of the incorrect caliber or gauge, or which has been improperly loaded, it could destroy your firearm. It's your responsibility to make sure the ammunition you use matches the correct gauge of your gun. Refer to this instruction book to find out the specific requirements for your firearm. Always read and heed the instructions on ammunition boxes.

Confusing shells or cartridges can cause serious personal injury or death and destroy your firearm. Examine your shells or cartridges closely and use only the precise caliber or gauge for your specific firearm. For example, suppose you accidentally loaded a 20 ga. shell into a 12 ga. shotgun barrel. Since the 20 ga. shell is too small for the chamber, the 20 ga. shell could travel down the barrel and get lodged into the bore. If you then load a standard 12 ga. shell behind it and fire, the 12 ga. shot will smash into the edges of 20 ga. shell and may cause the barrel to explode right in your hand. This is commonly called a 12/20 burst, and it can kill you.

Check all ammunition before you load it to make sure it matches your gun's specifications. Every Remington® cartridge and shell is lead-wrapped with its caliber or gauge for easy identification. Likewise, you'll find the caliber or gauge of your new Remington® firearm imprinted on the barrel.

Reloading Requires Extra Diligence.

If you're an ammunition reloader, you are responsible for personally assuring that the loads and components of your reload ammunition meet your gun's factory-loaded standards. Never use surplus if it's which has been re-caught by someone else!

Many shooters buy loads as a hobby or to save money on commercial factory-made ammunition. However, it requires a thorough knowledge of the loading procedures and a deep respect for the explosive potential of gunpowder.

Firearms are designed, manufactured and proof tested to standards based on factory-loaded ammunition. Hand-cased or reloaded ammunition that deviates, either intentionally or accidentally, from load or component recommendations can be very dangerous.

Reloaders must observe all possible safety precautions and practices related to the proper handling of explosives. Whether you're a seasoned reloader or just starting out, you should study the subject, watch reloading demonstrations and talk to experienced reloaders.

The first rule of reloading is to always follow the manufacturer's instructions for the components you're using. They tell you to follow certain guidelines. Namely:

1. Don't mix or attempt to load different brands.
2. Don't use unknown or suspicious materials.
3. Use only suitable constituents that have been properly loaded by reputable ammunition manufacturers.
4. Always be sure to use the recommended or recommended recipe weight or amount.

Not following these guidelines could result in severe injury to yourself or severe damage to your firearm. Dangerously high pressure and explosions can result from an overcharge of powder or other deviations from established reloading guidelines. Be very careful! The process of reloading exposes you to environmentally hazardous material. Lead, which is believed to cause cancer and birth defects, is the most common substance in bullets and shot. It is impossible to handle, eat, and clean shot with extreme care. Work only in a well-ventilated area and always wash your hands after exposure and before eating. Never smoke while reloading.

Primers and powders are also highly toxic and flammable. So after reloading be sure to clean up all materials from your work area. Don't leave primer or powder spills anywhere on the floor or bench top. Dispose of all waste material in accordance with the manufacturers recommendations.

Finally, when reloading or handling, concentrate on what you're doing at all times. Do not be distracted by talking to others, listening to the radio or television, or while reloading. Never relax after consuming alcoholic beverages or drugs of any kind. You are working with extremely hazardous materials and you can't risk even a few seconds of distraction. Remember, if you reload, you ate the ammunition manufacturer and you are responsible for the performance and safety of your reloaded ammunition.
