

Remington® Bolt Action Centerfire Rifle

Congratulations on your choice of a Remington® With proper care, it should give you many years of dependable use and enjoyment. For best results, we recommend that you use Remington Ammunition—the ammunition discussed in safety testing your firearm against our existing function and performance standards.

PICTURE 1 This diagram shows the main parts of a Remington Bolt Action Rifle. The pictures will aid in understanding the instructions to follow.

PICTURE 2 This picture shows one type of ammunition.

Important Parts of the Firearm

The Safety Mechanism

Note: All Remington Bolt Action Rifles function the same regardless of button appearance.

The safety mechanism provides protection against accidental or unintentional discharge under normal usage when properly engaged and in good working order. The safety mechanism is a valuable substitute for following the rules of safe gun handling.

To engage the safety mechanism, pull the safety mechanism fully to the rear towards the "S" position. See Picture 3.

Always put the safety mechanism in the "S" position before handling, loading or unloading the firearm.

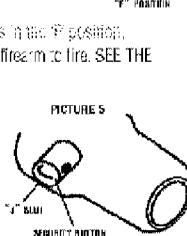

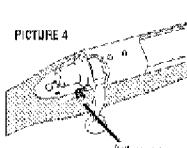

When you are ready to fire the firearm, push the safety mechanism forward towards the "F" position to disengage the safety mechanism. See Picture 4.

Do not touch the trigger while moving the safety mechanism. Your fingers and all other objects should be kept outside of the trigger guard area away from the trigger until you are actually ready to fire by pulling the trigger.

Never pull the trigger when the safety mechanism is in the "S" position.

WARNING: The firearm will fire if the safety mechanism is not in the "F" position.

Even when the safety mechanism is in the "S" position, careless handling can cause the firearm to fire. SEE THE TEN COMMANDMENTS OF FIREARM SAFETY ON PAGE 2.

The Security System

The firearm you have purchased comes with an integrated security system which is new to this product. This security system enables the owner to secure the bolt assembly on the firearm in the locked open position with the use of a special key.
