Subject: Out Today- Here's what's going on.

I have a very sick boy this morning, looks like the flue!
Anyway, here's what going on today.

Gary- there is a very HOT request from Jim Ronkainen for 45 auto P-I curves, this need to be done ASAP, if there are any questions/problem see Scott or Jim, other than that you've got a little SAAMI and please continue any effort on Chris's Scirocco bullet requests.

Steve & Jonathan- assuming that your finished with the 10K inspection of the 105, please plan on doing drop testing on M/710 extruded guns, do five 30.06 & five 270 rifles, check the flow chart for which rifles.

Bob & Jeff W.- please continue shooting 710 Basic Jack Function one 7mm & 300WM.

I started the five 7mm w/scopes, they have 40 rds. ea., shoot the next 60 rds. for a total of 100 and then have Jeff K. shoot one 5 shot group ea. for POI (mark & keep targets) then shoot the last 100 rds and repeat the POI check. (ammo is in long range)

The other five 7mm go straight though the 200 rd. jack function w/ no scope. (ammo is in shooting room)

Select five 300WM rifles and shoot the 200 rd. jack function, leave the other five for a scoped test.

Jeff K.- continue doing load verification and hand loading for Chris and shoot the 7mm POI when needed.

Jody- not sure what you have going on, the range is available today you can start back up on the 17 M2 & 17 HMR test barrel accuracy evaluation is nothing else takes priority.

Scott, I will give you a call, if some of the about e-mail addresses were wrong I'm sure you'll share with the guys.
I'll be home all day unless at the Dr. call if you need to.

Phillip
