Subject: Model 710 Trial & Pilot Action Items
Importance: High

Looking ahead we anticipate getting into Trial & Pilot testing shortly after completion of DAT Phase II. R & D was asked to put together a test plan for T & P product. Attached is a document that lists proposed activities (Inspections, Measurements & Testing) that together would comprise the Trial & Pilot Test. If everyone is in agreement with this list we will go back and generate detail around each of these activities and then publish a T & P Test Plan for final review.

Please review and get back with your comments by mid next week if at all possible.

Thanks,
Scott
