

THE REMINGTON® ULTRA MAGNUM FAMILY STILL OUT-PERFORMING THE COMPETITION

Madison, NC – Since their inception, Remington has continuously refined its family of legendary Ultra Magnums to create the most complete line of magnum cartridges available to today's big game hunters. For 2006, the Premier Scirocco Bonded line will feature a 7mm Remington Ultra Magnum with a 150 grain bullet. Additionally, Remington will offer Premier A-Frame loadings in the 7mm Remington Ultra Magnum with 175 grain bullet, and the category leading 300 Ultra Magnum with a heavyweight 200 grain bullet.

In 1999 Remington made ammunition history with the introduction of the 300 Remington Ultra Magnum. A new breed of cartridge, the 300 Ultra Mag delivers the highest velocity and energy, with the flattest trajectory available in a commercial non-belted magnum. This high-performance design set the stage for an entire family of Ultra Magnum cartridges to provide hunters with the ultimate combination of ballistic and terminal performance. The velocity and energy levels generated within the Remington Ultra Magnums are a result of their innovative case design which dramatically maximizes powder capacity to drive bullets at previously unknown hunting cartridge velocities. The non-belted, large diameter case is head-spaced from the shoulder like traditional rimless cartridges, which improves alignment of the cartridge and the rifle bore and results in increased accuracy.

Whether it's long-range whitetails, moose in the woodlands, or up close and personal brown bear, from North America to Africa, Remington makes an Ultra Magnum cartridge just for you. The Ultra Mag family features 4 calibers loaded with four different bullet styles in multiple grain weights. What ever your quarry, Remington's Ultra Magnums set the standard for big game performance. More details on the line up follow:

7mm Remington Ultra Magnum: One of the flattest shooting big game cartridges on the planet. The 7mm Remington Ultra Magnum provides big game hunters with trajectory levels previously delivered only by light-weight varmint calibers. At 24 percent more energy than the 7mm Remington Magnum and 12 percent more energy than the 7mm STW, the 7mm Remington Ultra Magnum will prove to be the perfect solution for medium and long range deer and elk hunting.

.300 Remington Ultra Magnum: Arguably the most versatile member of the Ultra Magnum family, the .300 Remington Ultra Magnum delivers a 180 grain .30 caliber bullet at greater velocities and energies than any other factory loaded .30 caliber magnum. With 13 percent more case capacity than the .300 Weatherby Magnum and 20 percent more than the .300 Winchester Magnum, the .300 Remington Ultra Magnum is capable of sending heavy bullets downrange at a sizzling muzzle velocity of 3300 fps with a 26-inch barrel. Sighting in the .300 Remington Ultra Magnum just two inches high at 100 yards delivers the bullet at less than three inches low at 300 yards. For hunters that prefer a .30 caliber projectile, the .300 Remington Ultra Magnum is at home on game fields anywhere in the world.
