**6th COMMANDMENT**

If Your Gun Fails to Fire When the Trigger is Pulled, Handle With Care. *If for some reason the ammunition doesn't fire when you pull the trigger, stop and inspect the firearm.* The 6th Command of Firearm Safety – always keep the muzzle pointed in a safe direction. Keep your fingers away from the trigger, then set the safety on, carefully open the action, unload the firearm and dispose of the cartridge safely. Remember that, anything that's a shell in the chamber, your gun is loaded and ready to use. Even if you tried to shoot and your gun didn't fire, treat your firearm as if it could still discharge.

7th COMMANDMENT

Always Wear Eye and Ear Protection When Shooting. *Your sight and hearing can be injured from shooting and should be protected at all times.* Wear protective shooting glasses to guard against flying shot, clay target chips, powder residue, unspent cartridge cases and even twigs and branches in the field. Also be sure to wear eye protection when you're disassembling or cleaning a gun so that loose metal parts (like springs) don't come in contact with your eyes. Continued exposure to shooting noise can permanently damage your hearing. On the range, where shotguns dominate the lot, be sure to use the maximum protection of a headset. And learn to use ear protection in the field, especially in localized locations like duck blinds.

**8th COMMANDMENT**

Be Sure the Barrel is Clear of Obstructions Before Shooting. *Before loading your gun, open the action and make sure there's no ammunition in the chamber or magazine.* Check the barrel for any obstructions or debris. Even a small amount of snow, mud, excess lubricant or grease in the bore can dangerously increase pressure and cause the barrel to bulge or burst when firing. Use a cleaning rod and patch to wipe away any rust, debris, moisture, oil, residues or obstructions in the barrel. Never try to shoot out an obstruction by loading another shell and firing.

When firing, rely on your instincts. If the roar or report of your firearm seems weak, stop everything, unload your firearm and be sure nothing is lodged in the barrel. What about the 12/20 bars? That's what can happen when the barrel is obstructed. So always be sure you're using the correct ammunition in your firearm and that it's free of obstructions.

**9th COMMANDMENT**

Don't Alter or Modify Your Gun and Have It Serviced Regularly. *Your firearm has been designed to operate according to certain factory specifications. You'll jeopardize your safety and that of others around you by attempting to alter its power, mechanical safety or other mechanisms.* So never alter or modify your firearm in any way.

Like any mechanical device, a firearm is subject to wear. It must be maintained and periodically serviced to assure optimum safety and performance. Only a qualified service technician should service, repair or modify your firearm or firearm. Consult your instructor book for instructions on how to send your firearm to the factory or to the location of the nearest Remington Authorized Service Center.

Proper cleaning and lubrication are also important to firearm maintenance and are necessary to assure accuracy, safety and reliability. Before cleaning, always make sure that your gun is completely unloaded. And always clean the barrel from the chamber end to the muzzle if possible.
