

12-GAUGE DUTY BUCKSHOT SHELLS

For Hard-Hitting Power.

LE 12-Gauge Duty, Training, and Qualification Shells. As part of our Law Enforcement "Direct System," Remington® offers a broad line of law enforcement 12-gauge shells for all applications: full-power Express® buckshot and Sluggo® slugs, reduced recoil loadings, and target loads. Everything is conceived and designed to meet law enforcement's critical demands whatever the duty or training situation. Our law enforcement shotshells provide the reliability, consistent performance, and stopping power you need when a shotgun comes out of the rack.

LE 12-Gauge Buckshot comes in various pellet sizes, full power and reduced recoil loads for your duty and training requirements.

Express® Buckshot is available in standard and magnum loadings, and provides the reliability, consistency, and stopping power that you expect. Available in 5 buckshot sizes: 000, 00, 0, 1, and 4. Our 9-pellet 00-Express LE Buckshot created a new standard of pattern performance with the addition of our one-piece compression section Power Piston® wad column, polymer buffering, and hardened 3% antimony pellets. This combination produces patterns 25% tighter than previous buckshot offerings.

1 Round of TAC 8, fired at
15 yards, 10 Buckle

5 Rounds of TAC 8, fired at
15 yds 10 Buckle

TAC 8® 00-Buckshot is a full load 8-pellet 00-Buck that boasts a highly concentrated 1/4" to 7/8" per yard pattern spread. The pattern is controlled by utilizing 00-buck with 3% antimony lead and a precisely loaded special shot cup. TAC 8 also eliminates the 9th pellet flyer that can totally destroy a good pattern. Five shots at 15 yds using an 870 Police 18" barrel, improved cylinder shotgun produced a spread of 9 1/4". In addition, the primer and mouth are waterproofed for maximum reliability under harsh environmental conditions.

Reduced Recoil 00-Buckshot is made specifically for duty and training applications that encourage shotgun usage. Our 9- or 9-pellet Reduced Recoil 00-Buckshot produces lower felt recoil by 40% for better follow-up shots. This buckshot is enhanced with Power Piston® shot cup, polymer buffering, and hardened 3% antimony pellets, which all contribute to outstanding patterns.
