### **1100 not cycling**

Thank you for your inquiry. The Model 1100 is designed to shoot either 2 3/4" or 3" shells, not both. The magnum barrel has a smaller gas orifice hole and 2 3/4" shells will not produce enough pressure to cycle in the magnum barrel.

### **Autoloader not cycling**

We apologize for any inconvenience you may be experiencing. Check to make sure that the gas orifice hole is clear and clean. Also, the magazine tube should not be lubricated. The action spring that pushes the bolt forward may need cleaning and lubricating. The stock will need to be removed for this inspection.
