Subject: 710 Magnum Update
Importance: High

Matt,

Thought I'd update everyone at the same time as to 710 Magnum DAT status. To refresh everyone's memory we were not able to test the "B-Series" guns, extruded receiver, due to dimensional issues with the magazine opening in the receiver. These guns were returned to Mayfield. The "A-Series" guns, standard 710 design, have been in DAT for some time. To date the following has been completed on this 15 gun sample.

- 1 Preliminary measurements
- 2 HS/Proof/HS
- 3 100 rd. Proof Test (Combined with strain gage test)
- 4 Initial Jack function
- 5 Initial Shoulder function
- 6 Accuracy
- 7 500 rd. Endurance
- 8 1,000 rd. Endurance

Subject to Protective Order - Williams v. Remington
