RESEARCH & DEVELOPMENT TECHNICAL CENTER
315 WEST RING ROAD

giving pressures below 95,000 psi, (approaching the limits of the transducer gauges). The grain size load will be plotted and a curve extrapolated to determine the load expected to produce a load of approximately 120,000-psi.

All testing will be done in the blow-up room using the high-speed video camera and witness paper. Before removing or otherwise disturbing the test samples after blow-up, photographs will be taken for the record. After collection and removal of the parts additional photographs of the various individual components will be taken for the record. All parts and will put in sample bags, boxed and temporarily stored for review if required.
