			Trigger Pull 4.226-4.385-4.349-4.426-4.388-Avg 4.495		
		Note -	This Gun had the center take down screw hole threads stripped out & the screw would not stay in. During the drop test this gun fired on the barrel horizontal, bottom down drop. Upon investigation of this, with the center take down screw stripped it allowed the stock to flex more and allow the action / bolt assy. to pull away from the fire control which was held in the stock by the rear take down screw. This could also be duplicated in a bench vise, which was demonstrated multiple times both with safe on and the safe off. This could not be done on a gun that had all 3 take down screws installed and tight.		

Note: This gun should not
 of been subjected to SAAMI
 Jar-off, Rotation or Drop
 with a stripped take down
 screw hole.
