All,

As information, a response from Bushnell on the rotated reticles and "fuzzy optics."

John

Dear John,

I have now seen the lab report and what is happening on the bad units you sent back is the following. A collar on these two units which is supposed to hold the optics in place is rotating because it is not properly locked in place. This leads to both the fuzzy optics and the rotated reticle problem you saw. From a technical standpoint, this is a pretty simple issue to fix. We have to make sure that all the units are made properly, not just most of them. We are communicating with the plant right now on this. If you have any additional problems, please get back to me.

Thanks,  
Chris

Dear John,

I just got the two samples in and we are evaluating them as we speak. As soon as I hear something, I will get back with you.

Thanks,  
Chris
