Dear Mike,

I just wanted to provide you with a quick update on the Receiver Insert Mold, the original core has been sent out for Electroless Nickel plating and concurrently we issued a new core to be built in the Orient. The plan is to fit the new core to the shut-offs and keep the plated core as a spare. We felt that this strategy would give the mold the integrity necessary for producing such a critical part. My expected delivery of the new core is the week of June 7th, with fitting to start immediately.

As always please feel free to call me if you any comments or concerns. I trust your testing went well last week as I did not hear from you. I hope that was a good sign.

Regards,

Rich Kosko
