Subject: magazine spring

Joe,
Based on the SAKO magazine, I would like to try a lighter magazine spring in the M/710 box. Would you contact the manufacturer of spring C-17028 and request 20 samples per the drawing but use .013/.014" thickness material? The current springs are spec'd at .017/.018" thickness. Please let me know of their response relative to timing. Thanks
