Can you read these files? Danny will not be a product team. Randy Murphy will be in Ilion at the Product team meeting representing R&D since he will be in Ilion for an O/U meeting anyway. I left some of the old status history on the current status reports for his benefit.

Call when you have a chance if either of you would like to discuss.

Planning to be in Mayfield to build 710 Short Action on Tuesday the 22nd. Is this a good time? May need to discuss the SPL or one piece system and what that means to you.

The UR data for the 17HMR and 17M2 was better than I had anticipated.

Will

Will,

I couldn't read 2 of your files: The Extruded Receiver and Short Action Status.

Also on the 504 17 M2 we are trying to get an average of 0.75 (and we seem to be about 0.80) and nothing greater than 1.0 inch.

Thanks,  
Kevin

The following are the status for the R&D / Mayfield projects. I will call in the morning to review.

Also included is the accuracy data from 17HMR & 17M2 UR test barrels.

Will
