

Remington Confidential

Drop at the comb – the distance from an imaginary line drawn along the top edge of the barrel to the foremost position of the comb.

Drop at the Heel - the distance from an imaginary line drawn along the top edge of the barrel to the point on the heel of the stock.

Both of these dimensions are for information only.

Cast off (or cast on) – Not required for rifle stocks.

Method: (for drop at Comb)

- Align the top of the barrel along back edge of the Drop Board
- Measure the distance from the Drop Board to the front-most position of the Comb
- Record the distance to the nearest 1/8"

Method: (for drop at Heel)

- Using the same procedure as mentioned above, measure the distance from the closest point on the top of the heel (just ahead of the butt-pad or butt-plate backer at the edge of the stock proper) to the back of the Drop Board. Record distance to nearest 1/8"

Data Required:

- Record rifle serial number
- Record drop at comb
- Record drop at heel

TLW0010U - Stock Pitch:

Not a critical measurement for centerfire rifles.

FIREARMS MEASUREMENTS TLW0010V THROUGH TLW0010Z:

TLW0010V - Chamber cast:

Use the .30-06-chamber drawing LB-153 for reference.
