**Subject:** Weekly Update 12/09/05

Bob,

Here is a rundown on last week:

Monday – Wednesday were occupied with the VMC runoff at REMorris.

The last 2 days of the week, I revised the 700 Bolt Assembly Process to add

F249751 so that the routings, BOM and cost could be finalized for an impending order, per Steve's request.

There were some questions concerning the M750 breech bolt line that needed answering.

I also initiated some production requested process changes in the 700 bolt assembly.

Additionally, tool inspect had issues with a gage that was returned from Plastech that needed resolving.

I also sent Dan Shumway the time study data I took at REM, so he can update his standards.

I continue to have involvement with Jim Doolittle, and now Gayle, on the SPL development.

Busy week!

Craig S. Becker
