Kyle,

This test is holding up PmPD for their next order of sear safety cams.

Please ensure that they get H.T.'d tonight.

Thanks,

Steve P.

Craig

I delivered the safety cams to heat treat early this morning. I ran into some problems getting these parts to heat treat seeing no order was generated for them over in powder metals. These parts were scheduled to be run so I could inspect them this afternoon. However, when I checked on these parts after lunch they had not processed them through micro-carb. They should be processed tonight and I will follow up on them first thing in the morning. I will notify you as soon as I know anything.

Thanks

Danielle Rice
