 > Packaging > Overall, packaging looked good. There were no can did not penetrate through the corrugated container. A not appear to have shifted. With the exception of three contents were present. 	ating's visual examination for the Model 710 T&P. Nons damaged outside of a few minor tears which Il guns were secure inside of the package and did
mate (by the safety lever) than was visible on the left. as if the barreled action was not mounted straight into	ith the production of the gun, however below are ith the implementation of a new mold at some point ble gap existed along the left hand side of the the same guns showed very little or no gap. In ite, the barrel appeared off center in it's bedding. peared on the right rear corner of the receiver/stock With the both of these gap issues, it was almost the stock. Iy into the stock when placed in the "fire" position.
