

Safe Firearm Opening & Handling Procedure

Objective: Prevent an accidental discharge of a firearm that comes into the OHL Building by using principles contained in the 10 commandments of gun safety.

- 1. Receiving a firearm: When a box or gun case comes into the room, open the box on the table with the sand box. Always treat a box that looks like a firearm like it is a firearm and treat every firearm as if it where loaded
- 2. Opening the box/case: When the box/case is opened, point the muzzle of the firearm at the sand box if not already doing so.
- 3. Check the action: With the firearm pointed in the direction of the sand box identify the type of action. Visually inspect for an open action and make sure the safety is in the 'safe' position. If you are unsure of the firearms operation, lock the firearm in the vise provided and ask for assistance.
- 4. Opening the action: If the firearnts action is closed, move the safety to the 'on' or "safe" position while pointing the muzzle at the sand box lock the firearm action into the vise; then open the action so the chamber of the firearm is exposed and check for live ammunition. If live ammunition is found in the firearm, the room should be cleared of all personal immediately and one of the following people should be contacted listed in order of preference: Chris Wright, and Reggie Turner.
- 5. Checking the magazine Once the chamber has been inspected for live ammunition, the magazine must be inspected for live ammunition by determining the magazine type; remove the magazine if possible or lift the carrier to expose the follower while the muzzle remains pointed at the sand box. If a live round is found in the magazine, secure the firearm in the jack with the muzzle pointed into the sandbox, clear the room, lock the door, and notify one of the following people immediately listed in order of preference: Chris Wright, and Reggie Turner.
- 6. Handling: When handling firearms, the muzzle should always point in a safe direction. No live ammunition should be loaded in the firearm anytime the firearm is in the building. Don't rely on the mechanical safety on the firearm.
- 7. Moving the firearm to storage: If the firearm is to be moved anywhere, the action should be open and the safety must be in the "safe" or 'on' position at all times and the 10 commandments of shooting safety must be followed.
- 8. Repacking for shipment: If the firearm is to be shipped to another location, the action must be in the open position and the safety in the "safe" or 'on' position, and no ammunition is to be shipped in the same box with the firearm.
