Thank you for your inquiry. We have a Safety Modification Program on certain model bolt action rifles. This is a voluntary program, it is not a recall. This is designed to remind people of the existence of the bolt-lock feature and to offer customers the opportunity to modernize their products. You will need to reinstall the factory trigger before we can do the modification. We will only do the modification if we can test the firearm after the modification has been done and we are unable to test our firearm with another manufacturer's trigger in it due to liability reasons. Once we have completed the modification you can reinstall the Timney trigger.

You can read more information regarding our firearms and our Safety Modification program through the front page of our website or the link below:

[http://www.remington.com/safety\\_modification\\_program/remington\\_safety.htm](http://www.remington.com/safety_modification_program/remington_safety.htm)

The safe use and performance of your firearm depends on correct assembly and routine maintenance, as well as adherence to the "10 Commandments of Firearm Safety." <http://www.remington.com/support/10comm.htm> It is critical that you familiarize yourself with the information in both the owner's manual and safety booklet. Whether you are a veteran shooter with a collection of Remington firearms, or a first time shooter, take the time to review this important literature and be certain that you are practicing firearm safety!

If you have any questions, please feel free to contact us at 1-800-243-9700 or 1-877-387-6691

I am writing regarding the notification about the safety modification program. I changed my trigger to a Timney trigger using the factory safety. Will this affect the modification? I don't want to ship my rifle to be modified if this trigger is not usable after the modification, if there is a problem with it I will reinstall the factory trigger. Thank you for your help in this matter.
