Dear Mr. Dixon,
Thank you for your inquiry. To determine whether your Model 700 rifle has a bolt-lock mechanism, either:

Call Remington toll-free at (877)387-6691 and a service representative will help you determine if your firearm has a bolt-lock mechanism, or

Take your Model 700 to a Remington Authorized Repair Center and a qualified gunsmith will examine your firearm and determine whether it has a bolt-lock mechanism. We do not have a serial block to give out.

This is a voluntary program, it is not a recall. This is designed to remind people of the existence of the bolt-lock feature and to offer customers the opportunity to modernize their products. We strongly recommend that you take advantage of this offer.

You can read more information regarding our firearms and our Safety Modification program through the front page of our website or the link below:

http://www.remington.com/safety_modification_program/remington_safety.htm

The safe use and performance of your firearm depends on correct assembly and routine maintenance, as well as adherence to the "10 Commandments of Firearm Safety." <http://www.remington.com/support/10comm.htm> It is critical that you familiarize yourself with the information in both the owners manual and safety booklet. Whether you are a veteran shooter with a collection of Remington firearms, or a first time shooter, take the time to review this important literature and be certain that you are practicing firearm safety!

If you have any questions, please feel free to contact us at 1-800-243-9700 or 1-877-387-6691.

I have a Remington Model 700 rifle in .270 caliber. I've been reading about a recall for these rifles. How can I tell if my rifle is one that needs repair? Where do the serial numbers start so I can check.
