Dear Mr. Spencer,  
Thank you for your inquiry. We changed the design of these firearms in 1982 from a bolt lock safety to a non bolt lock safety. We have a Safety Modification Program on certain model bolt action rifles including older model 700 rifles. This is a voluntary program, it is not a recall. This is designed to remind people of the existence of the bolt-lock feature and to offer customers the opportunity to modernize their products. If you have a bolt lock safety, we strongly recommend that you take advantage of this offer.

You can read more information regarding our firearms and our Safety Modification program through the front page of our website or the link below:

[http://www.remington.com/safety\\_modification\\_program/remington\\_safety.htm](http://www.remington.com/safety_modification_program/remington_safety.htm)

The safe use and performance of your firearm depends on correct assembly and routine maintenance, as well as adherence to the "10 Commandments of Firearm Safety." <http://www.remington.com/support/10comm.htm> It is critical that you familiarize yourself with the information in both the owners manual and safety booklet. Whether you are a veteran shooter with a collection of Remington firearms, or a first time shooter, take the time to review this important literature and be certain that you are practicing firearm safety!

If you have any questions, please feel free to contact us at 1-800-243-9700 or 1-877-387-6691.

I was wondering if you could give me a starting serial number for Remington model 700 rifles when they switched the safety mechanism so the bolt would open in the safe or fire position as opposed to just the fire position. If a serial number is not possible maybe you could give me the year they changed it.

Thank You

Mark Spencer
