Dear Mr. Larson,

Thank you for your inquiry. We apologize for the delay in response. According to the information provided your firearms were manufactured in or around 1974 & 1981 respectively. We do not offer a 3 point safety for our rifles. We want to make you aware of a safety modification program that we are offering on these firearms. You can view this information through the front page of our website or through the link below:

To Whom it may concern

Could Remington supply me with the date of manufacture for two Model 700 bolt action rifles in my possession? They are

1/ M700 ADL calibre 3006 serial # 6783865

2/ M700 BDL Calibre 308 serial # B 6296696

In addition,

* is there an aftermarket retrofit able 3 point bolt safety available that Remington recommends for these rifles

* can Remington recommend a person in Southern Ontario Canada who can assess the safety lever, or an alternative as to where an assessment can be made on these two rifles.

* based on the serial numbers provided, should an assessment of the safety catches on these rifles be assessed?

I would also like to take this opportunity relay a few thoughts on Remington products. Almost all the people in my family from my Grandfather to my brother, to the members of the hunting groups I hunt with have almost exclusively used Remington firearms. I can think of no better testament to the Remington product line. End of Story
