Dear Mr. Brannock,  
Thank you for your inquiry. According to the information provided, there is not a recall on your firearm. Your Model 700 is included in our Safety Modification Program. This is a voluntary program, it is not a recall. This is designed to remind people of the existence of the bolt-lock feature and to offer customers the opportunity to modernize their products. We strongly recommend that you take advantage of this offer.

You can read more information regarding our firearms and our Safety Modification program through the front page of our website or the link below:

[http://www.remington.com/safety\\_modification\\_program/remington\\_safety.htm](http://www.remington.com/safety_modification_program/remington_safety.htm)

The safe use and performance of your firearm depends on correct assembly and routine maintenance, as well as adherence to the "10 Commandments of Firearm Safety." <http://www.remington.com/support/10comm.htm> It is critical that you familiarize yourself with the information in both the owners manual and safety booklet. Whether you are a veteran shooter with a collection of Remington firearms, or a first time shooter, take the time to review this important literature and be certain that you are practicing firearm safety!

If you have any questions, please feel free to contact us at 1-800-243-9700 or 1-877-387-6691.

We cannot retrofit a detachable magazine to your firearm. Dimensions of the receivers are different and key parts are not interchangeable. The rate of twist is 1 in 10".

Three questions:

1. I see that you are recalling model 700's that have a bolt lock on safe to remove the lock. My 700 has a bolt lock on safe. What are the considerations which drive this change and do I need it?
2. Your 2002 issue of "This Is Remington Country" states that an optional detachable box magazine is available for the Model 700, (p 11). Can this be retrofitted to an 8MM Rem Mag?
3. I have been trying to identify the rifling twist used in the Model 700 8MM Rem Mag. My understanding is that is 1 in 10 in. Can you confirm this?

Thank You for your answers,  
Doug Brannock
