Dear Ken,
Thank you for your inquiry. According to the information provided, your firearm was manufactured in or around 1976. We have a Safety Modification Program on certain model bolt action rifles. This is a voluntary program, it is not a recall. This is designed to remind people of the existence of the bolt-lock feature and to offer customers the opportunity to modernize their products. If you have a bolt lock safety, we strongly recommend that you take advantage of this offer.

You can read more information regarding our firearms and our Safety Modification program through the front page of our website or the link below:

http://www.remington.com/safety_modification_program/remington_safety.htm

The safe use and performance of your firearm depends on correct assembly and routine maintenance, as well as adherence to the "10 Commandments of Firearm Safety." <http://www.remington.com/support/10comm.htm> It is critical that you familiarize yourself with the information in both the owners manual and safety booklet. Whether you are a veteran shooter with a collection of Remington firearms, or a first time shooter, take the time to review this important literature and be certain that you are practicing firearm safety!

If you have any questions, please feel free to contact us at 1-800-243-9700 or 1-877-387-6691.

I recently purchased this rifle used. I remember reading somewhere that there is a safety fix for older rifles available. When I unload the gun, I have to place the safety in the "fire" position to eject the cartridge. The "fix" I remember reading would allow you to keep the safety in the "safety" position while unloading. Can you give me more information on what I need to do? Also, can you tell me when this rifle was manufactured? Thanks.
