Dear Dr. McClellan,

Thank you for your inquiry. We have a Safety Modification Program on certain model bolt action rifles including older Model 700 rifles. This is a voluntary program, it is not a recall. This is designed to remind people of the existence of the bolt-lock feature and to offer customers the opportunity to modernize their products. If you have a bolt lock safety, we strongly recommend that you take advantage of this offer.

You can read more information regarding our firearms and our Safety Modification program through the front page of our website or the link below:

http://www.remington.com/safety_modification_program/remington_safety.htm

The safe use and performance of your firearm depends on correct assembly and routine maintenance, as well as adherence to the "10 Commandments of Firearm Safety." <http://www.remington.com/support/10comm.htm> It is critical that you familiarize yourself with the information in both the owners manual and safety booklet. Whether you are a veteran shooter with a collection of Remington firearms, or a first time shooter, take the time to review this important literature and be certain that you are practicing firearm safety!

If you have any questions, please feel free to contact us at 1-800-243-9700 or 1-877-387-6691.

I have 2 remington 700 rifles, a bdl I purchased this past year and an .243 adl my father purchased for me in the late 1970s. I plan to have my son shoot the adl next year. I have only one complaint with the adl and that is you have to put the safety in the fire position in order to open the bolt. I noticed my new bdl is not this way. Is there a way to alter the adl so that the bolt can be opened with the safety on?

Thank you

Dr. Marc McClellan nancymc@westriv.com
