Dear Mr. Garrels,  
Thank you for contacting Remington Country. To remove the bolt, follow these instruction:

Point the firearm in a safe direction.  
Put the safety mechanism in the "S" position.  
Do not touch the trigger while moving the safety mechanism.  
Raise the bolt handle.  
Rotate bolt stop counter-clockwise to vertical position.  
Pull the bolt handle all the way back.  
push bolt stop release in trigger guard.  
Slide the bolt assembly from the firearm.

You can view the complete owner's manual for more information on maintenance of your firearm at:

I just bought a new 270 ADL highpower rifle.  
How do I remove the bolt? Do I need to squeeze the trigger and then slide it out the back?  
Can't seem to get it out for cleaning, and bore sighting? (I'm new to using Highpower rifles)  
thanks,  
Trent
