Dear Mr. Barker:

Thank you for contacting Remington Country. The gun that you have was manufactured in 1972 at our firearms plant in Ilion, New York. Remington is extending through December 31, 2003, its safety modification program to remove the bolt-lock mechanism from certain Remington bolt-action centerfire firearms made prior to March, 1982. (Post-1982 bolt-action firearms were not manufactured with bolt-lock mechanisms). Your firearm was manufactured with this feature.

The unloading process for most bolt-action firearms with a bolt-lock mechanism cannot begin unless the manual safety is placed in the "F" or "off or Fire" position. If you participate in the program your firearm will be modified to eliminate the bolt-lock feature and you will be able to unload your firearm while the safety is kept in the "S" or "On Safe" position. The operation of your firearm will not otherwise be affected.

For more information on the safety modification use the link below:

I can't raise the bolt with the safety engaged. What's up with that?  
Thanks.
