Dear Mr. Olshewski,

Thank you for contacting Remington Country. The Model Seven scope mounts interchange with the new Model 673. We recommend contacting a optical dealer for recommendation on the rings. Medium should work well.

All Remington Model 600 and 660 rifles were manufactured with a bolt-lock mechanism and are subject to this bolt-lock safety Modification Program. These models were discontinued in 1979. Please see Important Safety Notice regarding the 1979 recall below. If you participate in the current Safety Modification Program, your firearm will be cleaned and inspected for proper functioning by a qualified gunsmith. Once the condition of your firearm has been assessed, you will be notified of one of the following:

Your rifle's trigger assembly is otherwise in good operating condition and the gunsmith will proceed to physically remove the bolt-lock feature so that your firearm can be loaded and unloaded while the safety remains in the "S" or "On Safe" position; or

Your rifle's trigger assembly is found to be in an unsatisfactory or potentially unsafe operating condition because of any number of factors, including wear, alteration or maintenance. The entire trigger assembly will be replaced with a new factory trigger assembly, which does not incorporate a bolt-lock mechanism.

For more details on this safety message, go to:

Customer (Peter Olshewski) 6/23/2003 10:45:31 AM  
I have purchased a new 673 and wish to order a Leupold scope and mounts. Do I need a mount for a model Seven? Do I need medium or high rings because of the vented rib and sights on the 673.  
I also own a Model 660 in 308 and understand that there was a recall on the action in the 70's because of trouble with the safety. Could you tell me what the problem is and if there is a simple fix? I have never had a problem with it at all. Thank you, Peter J. Olshewski
