Several weeks ago I emailed you concerning an accidental discharge that (fortunately) did not kill/injure anyone ... just my friends pickup truck. I explained that I had only recently discovered that this is not an uncommon occurrence with this model rifle and that Remington has a program for repairing/replacing the trigger mechanism. I asked for information concerning this. However, the 2-3 days response time has turned into about twice that many weeks and I have not heard anything from your company. Please provide this info. It seems that it would be something that you would want to do ... ??

Thank you.

Harold Overton
