Dear Mr. Stephenson,

Thank you for contacting Remington Country. Your rifle was originally installed with a bolt-lock, which means you have to put the safety switch on fire before you can open the bolt. We are offering a conversion at a special price if you would like your firearm converted, so that you can open the bolt at anytime with the safety on safe. To view more details regarding this modification, go to:

I have an older Remington model 700BDL rifle. The safety switch must be in the fire position in order to lift the bolt. This prevents following the safety suggestion of loading and unloading the rifle in the safe position. Can the rifle be altered so it can be loaded/unloaded in the safe position?
