Dear Jason:

Thank you for visiting Remington Country. According to the information that you provided, your Remington Model 700 was produced in or around 1976 and the rate of twist should be 1:10. We do not have production totals for specific calibers. The Model 700 was introduced in 1962 and is still in production today. This model is widely recognized as the "most accurate out of the box production rifle" on the market today.

We would suggest that you review the information found on our homepage in the Safety Center entitled "Bolt Action Safety Message: Safety Modification Program for certain pre-1982 rifles".

I have recently purchased a 25-06 model 700 BDL heavy barrell, I wish to find out the date of manufacture, twist rate and any other information, on this rifle. The serial number is A6283391. Thankyou and if any information can be past on I would appreciate it. Cheers and thanks
