Dear Sir/Madam,

6/3/2004 11:13:32 AM

Thank you for your interest in Remington firearms. They may have heard of our offer to convert older models to remove the bolt-lock. Models produced before around 1982 had a bolt-lock safety which means you had to put the safety switch on fire before you could open the bolt.

You can view the information available regarding this and any other safety issues at the following section of our site:

<http://www.remington.com/safety/safety.htm>

We can check the serial number of the rifle you intend to purchase for the date of manufacture if you would like to forward it before you purchase it. The Youth Model 700's were not introduced until 1998.
