Dear Jeffrey,

Thank you for your inquiry. When the safety is in the rearward SAFE position, the sear and disconnector can not be separated. There is no safety on the firing pin itself.

I am seriously shopping for my next deer / bear rifle and like the 673. I have owned Winchesters before and want to understand more about how the Remington two-position safety works. When of 'safe', I understand that the trigger is blocked from being pulled. Is the firing pin also blocked from moving forward against the cartridge? Thanks, Jeff Herbine
