What's the best way to break loose the sear adjustment screw? I recently
purchased a 700 vs and attempted to adjust the trigger as I've
successfully done to the rest of my 700's. I did break a screwdriver tip
without any success in moving the screw. They are new tools, pachmyar,
gunsmithing set. A friend of mine also experienced this event and
purchased an aftermarket trigger to replace his. I like the 700 and
purchased it partially due to the adjustable trigger. Before attempting
the adjustment, I did scrape off the coating on the screws.
Thanks for your attention,
Marty
