I seen on a remington forum that there was a recall on this model due to mis-fire while saftey was on. I was wondering if that to be true as I was given this firearm by my Father and wanted to make sure before taking it afield. I noticed the bolt cannot be opened while the safe is on(atleast while it is unloaded). The rifle is from 1950 I believe as ww is stamped in the barrel.

Thank You,

Steve McCarthy
