

Instruction Book for:
MODEL 700 ETRONX
BOLT ACTION CENTERFIRE RIFLE

Remington

- PAGE 2-3... THE TEN COMMANDMENTS OF FIREARM SAFETY
- PAGE 4-5... IMPORTANT PARTS OF THE FIREARM
- PAGE 13... HOW TO LOAD AND UNLOAD
- PAGE 14... CLEANING AND MAINTENANCE
- PAGE 17... HOW TO OBTAIN PARTS AND SERVICE

Eliphalet Remington's first
Rifles helped a proud tradition
of safety & responsibility.

A Tradition of Performance and Safety.

In 1816 Eliphalet Remington was confident he could make a firearm that was as good or better than any he could buy. His confidence was well founded. The barrel he handcrafted set a new standard for firearm accuracy and spawned generations of products that have made Remington® Arms America's leading gun maker. While performance and style are certainly hallmarks of Remington firearms, one factor ultimately drives their performance: Safety. Eliphalet Remington never lost sight of the fact that his rifles were specifically ethically designed and could kill someone if handled improperly. And after more than 180 years, the same holds true for any firearm, including your new Remington. Eliphalet Remington's first flintlock launched a proud tradition of accuracy and responsibility.

Safety is Critical to Performance.

A superbly crafted gun is only as good as the hands that hold it. You can never be too careful. Most accidents are often caused by careless oversights such as failing to control the position of the muzzle, failing to fully engage the safety, loading ammunition in the chamber or using inappropriate tools. These oversights can result in the destruction of life, limb or property. There's no calling back a bullet once it's been fired, so it's critical that you know the principles of safe gun handling and storage before you ever take your new Remington firearm out of the box.

The proper use and performance of your firearm depends on correct assembly and maintenance, so it's critical that you familiarize yourself with the information in this instruction book. Even if you're a veteran shooter with a collection of Remington firearms, take the time to read this literature. Not all firearms are the same. That means the first step in safe handling is to learn the features and requirements of your new Remington.

The Ten Commandments of Firearms Safety should be learned. If you memorize them, let them govern your actions wherever and whenever you're involved with firearms in the field, on the range, or in your home. Please take the time to review and understand them now.

1st COMMANDMENT

Always Keep the Muzzle Directed in a Safe Direction.
This is the most important gun safety rule. A safe direction is one in which an accidental discharge will not cause injury to yourself or others. Never point your gun at anything you don't intend to shoot. Be especially careful when you're loading or unloading. Treat every gun as if it were loaded, regardless of its condition. Where the muzzle is pointed at all times, even when your firearm is unloaded, no one will be injured by an accidental discharge if you keep your firearm pointed in a safe direction. It's as simple as that.

2nd COMMANDMENT

Firearms Should be Unloaded When Not Actually in Use.
Load your firearm only when you're in the field or at the range and ready to fire. Never let a loaded gun out of your sight or out of your hands. Unload it as soon as you're finished shooting — before you bring it into your car, camp or home. Remember, unloading your firearm means unloading it completely, so there's no ammunition in the chamber or in the magazine. Handle and hold a firearm passing it to someone else, visually check the chamber receiver end to see if they do not contain ammunition. Always keep the gun's action open when not in use. Never assume a gun is unloaded even if you were the last person to use it. Always check for yourself.

Let common sense rule when you carry a loaded gun. If you're in a situation that could risk accidental discharge — such as crossing a fence, wading through a stream or climbing a tree — always unload your gun. Never pull or push a loaded firearm toward yourself or another person. And never carry a loaded gun in a scabbard, detached holster or gun case.

Certain firearms (including some Remington® rifles and shotguns) are equipped with internal security devices to prevent unauthorized use. In addition, some firearms owners use external devices, such as cable locks and trigger blocks, for the same purpose. Even if you use both a device, you should still keep your firearm unloaded when stored or not in use. And using internal or external devices can not substitute, however, for securing your firearms and ammunition in a separate, locked location.

***Safe storage of firearms** is just as critical as safe handling. Never store guns loaded. Be sure to keep your firearm in a secure place where unauthorized persons cannot get their hands on them without your knowledge.*

***Take special care** There are children around. Kids are fascinated by guns. It's a natural curiosity that can have tragic consequences when not properly supervised. Store your firearms in a locked gun safe or secure location that physically bars a child from gaining access.*

***Ammunition should be stored** and locked in a location separate from your firearm. Never leave an unsecured firearm or ammunition in a closet, dresser drawer or under the bed. Remember, it is your responsibility to make sure that children and others unfamiliar with firearms cannot get access to your firearm and ammunition.*

3rd COMMANDMENT

Don't Rely on Your Gun's Safety.

Treat every gun as if it can fire at any time, whether or not there's pressure on the trigger. Your firearm has been carefully designed to maximize performance and safety. However, because a gun's safety is a mechanical device, it could fail.

Human error is a more likely reason for a gun safety to fail. By mistake, you may think the safety is on when it really isn't. Or the safety may have been disengaged without your knowledge. Or you may think your gun is unloaded when there's actually a cartridge or shell in it. A mechanical safety is not a substitute for common sense. It's merely a supplement to your proper handling of a firearm.

Never touch the trigger on a firearm until you are ready to shoot. Keep your fingers away from the trigger when you're loading or unloading. And don't pull the trigger when the safety is disengaged or positioned between safe and fire.

Before using your gun, read this instruction book to understand the exact function and operation of your firearm's safety. Even when the safety is on, maintain control of your loaded firearm and control the direction of the muzzle. In other words, don't rely on your safety to protect you during handling. If your firearm's internal mechanisms are broken or have been damaged, your firearm may fire even when the safety is on. Remember, you and your safe gun handling practices are your best safety.

41st COMMANDMENT

Be Sure of Your Target and What's Beyond It.

You can't stop a shot in mid-air, so never fire unless you know exactly where your bullet is going and what it will strike. Never fire at a sound, a movement or a patch of color. A number in camouflage can easily be mistaken for a target by an impulsive shooter. Before you pull the trigger, be absolutely sure of your target and what's behind it. Make sure

the shot does not stop, such as a hillside or dense material like sand. Remember, bullets can travel greater distances with tremendous velocity. Know how far your shot will go if you miss your target or the bullet ricochets.

THE 5TH COMMANDMENT

Use Proper Ammunition.

Every firearm is designed to use a certain caliber or gauge of ammunition. Using the wrong ammunition, mismatched ammunition or using improperly reloaded ammunition can cause serious personal injury or death. And it only takes one cartridge or shotshell of the incorrect caliber or gauge, or which has been improperly loaded, to destroy your firearm. It's your responsibility to make sure the ammunition you use exactly matches the caliber or gauge of your gun. Refer to this instruction book to find out the specific requirements of your firearm. Always read and heed the instructions on ammunition boxes.

Confusing shells or cartridges can cause serious personal injury or death and destroy your firearm. Examine your shells or cartridges closely and use only the correct caliber or gauge for your specific firearm. For example, suppose you accidentally loaded a 20 ga. shell into a 12 ga. shotgun. Because the 20 ga. shell is too small for the chamber, the 20 ga. shell could travel down the barrel and get lodged in the bore. If you then load a standard 12 ga. shell behind it and fire, the 12 ga. shot will slam into the caged 20 ga. shell and may cause the barrel to explode right in your hand. This is commonly called a 12/20 burst, and it can kill you.

Check all ammunition before you load it to make sure it matches your gun's requirements. Every Remington® cartridge and shell is head-stamped with its caliber or gauge for easy identification. Likewise, you'll find the caliber or gauge of your new Remington firearm imprinted on the barrel.

Reloading Required Extra Diligence.

If you're an ammunition reloader, you're responsible for personally ensuring that the loads and components of your reloaded ammunition meet your gun's factory-tested standards. Never use shams if they've been recased by someone else!

Many shooters handload a hobby to save money on commercial factory-made ammunition. However, it requires a thorough knowledge of casting procedures and a deep respect for dangerous potential explosive powder.

Firearms are designed, manufactured and proof-tested to safe standards based on factory-loaded ammunition. Hand cast or reloaded ammunition that deviates, either intentionally or accidentally, from load or component recommendations can be very dangerous.

Reloaders must observe all possible safety precautions and practices related to the proper handling of explosives. Whether you're a seasoned reloader or just starting out, you should study the subject, watch reloading demonstrations and talk to experienced reloaders.

The first rule of *reloading* is to always follow the manufacturer's instructions for the components you're using. They tell you to follow certain guidelines. Namely:

1. Don't mix brands of primers or powders.
2. Don't use unknown or suspect card components.
3. Use only suitable components that have been tested by reputable ammunition, powder and propellant manufacturers.
4. Always be sure to use the manufacturer's recommended load when reloading.

Not following these guidelines could result in serious injury to yourself or severe damage to your firearm. Dangerously high pressure and explosions can result from an overcharge of powder or other deviations from established reloading guidelines. Be very careful. The process of reloading exposes you to environmentally hazardous material. Lead, which is known to cause cancer and birth defects, is the most common substance in bullets and shot. It is highly toxic and lead bullets and shot will extremes care. Work only in a well-ventilated area and always wash your hands after handling and before eating. Never smoke while reloading.

Primers and powders are also highly toxic and flammable. So after reloading be sure to clean up all materials in your work area. Don't leave primer or powder spills anywhere on the floor or bench top. Dispose of all waste material in accordance with your manufacturer's recommendations.

Finally, when reloading or handling concentrate on what you're doing at all times. Do not be distracted by talking to others, listening to the radio, watching TV while reloading. Never reload after consuming alcoholic beverages or drugs of any kind. You are working with extremely hazardous materials and you can't risk even a few seconds of distraction. Remember, if you reload, you are the ammunition manufacturer and you are responsible for the performance and safety of your reloaded ammunition.

6th COMMANDMENT

If Your Gun Fails to Fire When the Trigger is Pulled, Handle With Care. If for some reason the firearm doesn't fire when you pull the trigger, stop and remember the 1st Commandment of Firearm Safety – always keep the muzzle pointed in a safe direction. Keep your fingers away from the breach, then put the safety on, carefully open the action, unload the firearm and dispose of the cartridge safely. Remember that anytime there's a shell in the chamber, your gun is loaded and ready to fire. Even if you tried to shoot and your gun didn't fire, treat your firearm as if it could still discharge.

7th COMMANDMENT

Always Wear Eye and Ear Protection When Shooting. Your sight and hearing risk injury from shooting and should be protected at all times. Wear protective shooting glasses to guard against flying shot, clay targets, chips, powder residue, ruptured cartridge cases and even twigs and branches in the field. Also be sure to wear eye protection when you're disassembling or cleaning firearms, tensioned parts (like springs) and clearing solvents don't come in contact with your eyes. Unprotected exposure to shooting noise can permanently damage your hearing. On the range, where shooting volume tends to be loudest, be sure to use the maximum protection of a headset. And ear to use ear protection in the field, especially in enclosed locations like duck blinds.

8th COMMANDMENT

Be Sure the Barrel is Clear of Obstructions Before Shooting. Before loading your gun, open the action and make sure there's no ammunition in the chamber or magazine. Check the barrel for any obstructions or debris. Even a small amount of snow, dirt, debris, unspent or grease in the bore can dangerously increase pressure and cause the catastrophic bulge or burst when firing. Use a cleaning rod and patch to wipe away any rust, debris or any other obstacles or obstructions in the barrel. Never try to shoot out an obstruction by loading another shell and firing!

When firing, rely on your instincts. If the noise coming from your firearm seems weak, stop everything. Unload your firearm and be sure nothing is lodged in the barrel. Remember the 1200 burst? That's what can happen when the barrel is obstructed. So always be sure you're using the correct ammunition in your firearm and that it's free of obstructions.

9th COMMANDMENT

Don't Alter or Modify Your Gun and Have it Serviced Regularly. Your firearm has been designed to operate according to certain factory specifications. You'll protect yourself and that of others around you by attempting to alter its design, mechanical safety or other mechanisms. So never alter or modify your firearm in any way.

Like any mechanical device, a firearm is subject to wear. It must be maintained and professionally serviced to assure optimum safety and performance. Only a qualified service facility should service, repair or modify your Remington® firearm. Consult your instruction book for instructions on how to send your firearm to the factory or to the location of the nearest Remington repair station.

Precise cleaning and lubrication are also important to firearm maintenance and are necessary to assure accuracy, safety and reliability. Before cleaning, always make sure that your gun is completely unloaded. And always clean the barrel from the chamber end to the muzzle when possible.

Make it a practice to clean your bore every time you're going to shoot. Be sure to clean your entire gun before and after long term storage and no less than once a year. It's also important to clean your gun whenever it's been exposed to adverse conditions such as rain, dirt, mud, snow, sand or saltwater.

For safe and dependable operation of your firearm, all parts of your gun must be properly cleaned and lubricated. Periodically inspect the internal workings of your firearm to be sure they're clean and free of rust, unlubricated oil and debris.

Use recommended lubricants on your gun and do not over-lubricate. Excessive use of a non-recommended lubricant could adversely affect the function and safe operation of your firearm. Remember, you are responsible for the proper care and maintenance of your firearm. Failure to properly maintain your firearm can not only damage or ruin your firearm, it can expose you and others to unnecessary risks of personal injury or death.

Remington® has a wide range of firearm care products and resources for best results when cleaning your gun. Everything from solvents and lubricants to rods and patches. They're all available from your Remington dealer.

10th COMMANDMENT

Learn the Mechanisms and Handling Characteristics of Your Firearm.

Not all guns are alike. They have different mechanical characteristics that dictate how you should carry and handle them. Anyone who plans to use a firearm should first become totally familiar with the type of firearm it is and the safe handling procedures for loading, unloading, carrying, shooting and storing it.

Before you even unpack your new Remington firearm, read the instruction book from cover to cover and familiarize yourself with the different components parts of the gun. Then read, understand and follow the Ten Commandments of Firearms Safety in this book.

WARNING: Discharging firearms in poorly ventilated areas, closed rooms or working ammunition may result in exposure to lead, a substance known to cause birth defects, reproductive harm and other serious health problems. Have adequate ventilation and wear safety gear, including a respirator, when shooting indoors and immediately after exposure.

DRINK SOBER!

There's one other rule that must be followed when handling firearms; in fact, respect for this rule is necessary in order to effectively practice the Ten Commandments of Firearms Safety. The rule is: SHOOT SOBRIK! Guns and alcohol or drugs make a deadly combination. Alcohol can consume any individual and mildly impair your judgment or physical coordination when you're using a firearm. A staggering percentage of the shooting accidents that occur every year involve alcohol or drugs. Be smart. Always shoot sober and stay alive.

WARNING: Failure to obey any of these safety rules may result in serious injury or death to the shooter or bystander and damage to property. To learn more about gun safety, mechanics and practices, see Ten Commandments of Firearms Safety. You can receive a copy of the book by mail or download it at the website of Remington Arms Company, Inc., (www.remington.com), P.O. Box 700, Madison, NC 27025-4700, or call us at 1-800-218-8700.

DON'T KEEP THIS TO YOURSELF.

Now that you're gun owner, you have the obligation to let everyone know shooting sports are safe for everyone—participants and bystanders alike. You can do this by practicing these principles of firearm safety and passing them on to others—especially new shooters. Set an example for beginners. Be a guide to their safe entry into the exciting world of shooting sports. Invest your time and patience in the growth of the sport and in its future. After all, it's your love of the sport that led you to buy a new Remington.

Firearm ownership is a right and a privilege. It's a right guaranteed in this nation's Constitution. It's a privilege which carries with it a personal responsibility to use your firearm in a way which will ensure your safety and the safety of others. The preservation of this right and privilege depends on the personal commitment of you and your fellow shooters to the safe and responsible use of firearms. i.e. the Ten Commandments of Firearms Safety outlined in the book guides you at all times. Teach and promote these rules whenever you can. Remember, firearm safety depends on you! That's the only way to really enjoy your new Remington firearm and to preserve sport shooting as we know it today.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Consult the dealer or an experienced radio/TV technician for help.

CAUTION: Any modification to this product not expressly approved by Remington Arms could void the user's authority to operate the equipment.

Remington Model 700™ ETRONX® Bolt Action Rifle

Congratulations on your choice of a Remington. With proper care, it should give you many years of dependable use and enjoyment. For best results, we recommend that you use Remington EtronX Ammunition. The ammunition used in accuracy testing your firearm against our exacting function and performance standards.

PICTURE 1 This picture shows the main parts of a REMINGTON AUTOLADING RIFLE.
The picture will aid in understanding the instructions in the book.

NOTE: This firearm is designed for use with Remington EtronX™ or EtronX® ammunition ONLY.

ETRONX AMMUNITION U.S. Patent 5,646,367 Other Patents Pending

PICTURE 2
This picture shows the parts of the ammunition.

Firearm Safety

A person using any firearm has assumed an important responsibility: you must use your firearm in a way that will ensure not only your own safety, but that of others. Safe gun handling is not a part-time or occasional requirement – it is a full-time responsibility. You must know how to use your firearm safely all the time, under all circumstances. Never use any firearm without a complete understanding of how it works and how to use it safely.

This instruction book is intended to help you learn how to properly and safely use and care for your Remington firearm. Only when you understand and can safely practice all of the instructions in this book should you begin to use the firearm with live ammunition.

For the safety of the shooter and bystanders, if you sell or loan this firearm, this book must accompany the firearm. If you have any questions concerning the safe use of your Remington firearm, write to us at Remington Arms Company, Inc., Consumer Affairs Division, P.O. Box 700, 800 Remington Drive, Madison, North Carolina 27025 or call toll-free 1-800-343-9700.

Model 700TM ETRONX[®] Technology Overview

The Model 700 EtronX rifle represents the latest development in firearms and ammunition technology. Outwardly, the Model 700 EtronX looks and feels like a standard Model 700. In fact, the rifle shares many of the same components with the Model 700. Internally, however, the Model 700 Etron X rifle uses state-of-the-art technology to fire electric primed Remington[®] EtronX ammunition. Where a standard Model 700 and other conventional firearms utilize the impact of a firing pin on a percussion primer to ignite the cartridge's powder, the electronic ignition system of the Model 700 EtronX uses an electrical pulse to accomplish the same action with electric primed EtronX ammunition.

The electronics that generate the electrical firing pulse are also used to control the safety function of the firearm. The firearm's electronics:

- Monitor the position of the safety mechanism and key switch.
- Control the firing cycle if a fire pulse is generated only if certain pre-determined conditions are met.
- Check for the presence of a "round of ammunition" in the rifle's chamber when the firearm is in the ready-to-fire state ("round present sensing").
- Self-monitor the state and condition of the electronics.
- Monitor the battery's voltage.
- Communicate the operating condition of the firearm to the shooter through the **LED** (Light Emitting Diode) mounted in the top of the stock just behind the receiver tang.

Depending upon the conditions detected by the firearm's electronics, the LED may be (i) OFF (not illuminated), (ii) turned ON solid or (iii) flashing a status code.

To conserve energy, the Model 700 EtronX was designed to put itself into a low-power consumption mode after certain periods of inactivity. To reactivate the firearm after it has gone into a low-power consumption mode, it is necessary to cycle the safety mechanism from the **S-SAFE** to the **F-FIRE** position.

As with all firearms, it is important that the ammunition used exactly matches the caliber or gauge markings on your firearm. With the introduction of electric primed ammunition, it is also important that the ammunition's primer is compatible with the firearm in which it is being used. Electric primed Remington EtronX ammunition is physically identical to conventional ammunition with the exception of the primer. See Picture 2. The EtronX electric primer is visibly distinct and different from a conventional primer in that it has a circular contact in the center of the primer. The Model 700 EtronX is designed to chamber with electric primed EtronX ammunition only.

A troubleshooting guide for the Model 700 EtronX is included beginning on page 20 of this instruction book. The troubleshooting guide, in conjunction with this instruction book, should answer most questions you may have about your rifle and its operations.

U.S. Patents 5,755,056; 5,779,433; 5,808,286; 5,937,798 and other Patents Pending.

The Operating Sequence

The operating sequence of the Model 700 EtronX is as follows:

- Enable the firearm by turning the key switch (1) until it is in-line with the barrel. The key slot will be positioned at the **ON** symbol (1) on the key switch.
- When the safety mechanism is moved to the **F-FIRE** position without a cartridge chambered, the LED (Light Emitting Diode) will flash a status code ("check cartridge" (e.g. low battery), or will remain **OFF** until a cartridge is loaded and sensed present in the chambered locked chamber).
- When a cartridge is loaded and sensed present by the firearm's electronics in the closed and locked chamber and the safety mechanism is in the **F-FIRE** position, the LED turns **ON** solid and the firearm is ready to fire.
- When the trigger is pulled, the chambered cartridge fires and the LED is turned **OFF**.
- When the fired cartridge is ejected and another cartridge is chambered and sensed present by the firearm's electronics (with the safety mechanism in the **F-FIRE** position), the LED turns **ON** solid. If the cartridge is removed from the chamber, the firearm's electronics sense the "round is no longer present" and turns the LED **OFF**.
- When the safety mechanism is moved to the **F-FIRE** position with a cartridge chambered, it takes approximately 1/2 second for the LED to turn **ON** solid, indicating the rifle is ready to fire.
- After a cartridge is sensed present and the safety mechanism remains in the **F-FIRE** position, cartridges can be fired every 6 seconds.

- Whenever the LED is turned ON solid, the firearm is ready to fire.
- If the firearm has gone into the low power consumption mode, cycle the safety mechanism to the S-SAFE position and then to the F-FIRE position to reactivate the firearm.
- When you are finished shooting, disable the firearm by: (1) moving the safety mechanism to the S-SAFE position; (2) turning the key switch until it's perpendicular to the barrel such that the key switch will display the OFF symbol (0) on the key switch and (3) unloading a magazine from the magazine chamber.

A troubleshooting guide for the Model 700™ HunterX™ is included beginning on page 203 of this instruction book. The troubleshooting guide, in conjunction with this instruction book, should answer most questions you may have about your rifle and its operation.

Important Parts of the Firearm

The Safety Mechanism

The safety mechanism provides protection against accidental or unintentional discharge under normal usage when properly engaged and in good working order.

To engage the safety mechanism, put it in the S-SAFE position. See Picture 3.

Always put the safety mechanism in the S-SAFE position before handling, unloading or disassembling the firearm.

When you are ready to fire the firearm, put the safety mechanism in the F-FIRE position to disengage the safety mechanism. See Picture 4.

Do not touch the trigger while moving the safety mechanism. Your fingers and all other objects should be kept outside of the trigger guard and away from the trigger until you are actually ready to fire by pulling the trigger.

Never pull the trigger when the safety mechanism is in the S-SAFE position.

WARNING: If the LED is turned OFF solid, the trigger finger warning light is off.

Even when you think the safety mechanism is in the S-SAFE position, careless handling can cause the firearm to fire. See the TEN COMMANDMENTS OF FIREARM SAFETY on page 2.

The Key Switch

The key switch is located in the bottom of the pistol grip. See Picture 5. The key switch is used to both enable and disable the electronic system.

WARNING: This key switch should always be in the OFF/DISABLED position after the key removed and stored securely when the firearm is not in use.

WARNING: The key switch should always remain in the OFF/DISABLED position until you are ready to use the firearm again.

The key switch **MUST** be in the ON/ENABLED (1) position when using the firearm. The key switch is in the ON/ENABLED position when the key switch is fully into the barrel. See Picture 5.

The key can be removed from the key switch in either the OFF/DISABLED (0) or ON/ENABLED (1) position.

The Light Emitting Diode

The LED is located on the top of the stock just to the rear of the receiver. See Picture 6.

The system status of the firearm is communicated to the user through flashes or the LED. There is a two (2) second delay after each string of flashes and then the status code is cleared.

The LED flashes are described as follows:

- LED ON solid - Fircarm is ready to fire.
- 1 Flash = Battery Low 1 (The battery's voltage is low and will require replacement soon. With about one battery, you may be able to get another 100+ shots before the battery drops to "Battery Low 2".)
- 2 Flashes = Battery Low 2 (Battery **MUST** be replaced to clear this status code.)
- 3 Flashes - Key switch in **OFF/DISABLED (O)** position when the safety mechanism has moved from the **S-SAFE** to the **F-FIRE** position. (Status code is cleared by moving the safety mechanism from the **F-FIRE** position to the **S-SAFE** position and turning the key switch to the **ON/ENABLED (I)** position.)
- 4 Flashes = Trigger was pulled when the safety mechanism was moved from the **S-SAFE** position to the **F-FIRE** position. (Status code is cleared by cycling the safety mechanism from the **F-FIRE** position to the **S-SAFE** position.)
- 5 Flashes - Battery installed with the safety mechanism in the **F-FIRE** position. (Status code is cleared by cycling the safety mechanism from the **F-FIRE** position to the **S-SAFE** position.)
- 6, 7, 8, 9, 10 and 11 Flashes = Factory Service Required. Do not attempt to use your firearm.

The Battery

The Model 700™ I or X™ uses a conventional 9-volt battery located in the recoil pad. See Picture 7. For best all-around performance, Remington® recommends the use of an alkaline battery in the Model 700 EtronX.

TO REMOVE AND INSTALL THE BATTERY:

WARNING: Check the chamber and magazine to make sure there are no cartridges loaded. NEVER attempt to remove or install a battery on a loaded firearm.

1. Point the firearm in a safe direction.
2. Put the safety mechanism in the **S-SAFE** position.
3. Turn the key switch to the **OFF/DISABLED (O)** position.
4. Using a Phillips screwdriver, loosen and remove both recoil pad screws and remove the recoil pad.
5. Remove the 9-volt battery.
6. Install the replacement battery as shown in Picture 7, making sure the + and - terminals on the battery match the corresponding terminal marking on the safety handle.
7. Replace the recoil pad and tighten both recoil pad screws. Be careful not to overtighten the recoil pad screws.

The Bolt Assembly

The bolt assembly locks the cartridge into the chamber.

TO INSTALL THE BOLT ASSEMBLY:

WARNING: Check the chamber and magazine to make sure there are no cartridges in the firearm. NEVER attempt to install the bolt assembly on a loaded firearm.

1. Point the firearm in a safe direction.
2. Put the safety mechanism in the **S-SAFE** position.
3. Turn the key switch to the **OFF/DISABLED (O)** position.
4. Align the lugs of the bolt assembly with the receiver. See Picture 8.
5. Slide the bolt assembly into the receiver and push all the way in.
6. To close the bolt assembly in closed position, pull the bolt handle down.

TO REMOVE THE BOLT ASSEMBLY:

WARNING: Check the chamber and magazine to make sure there are no cartridges in the firearm.
NEVER attempt to remove the bolt assembly on a loaded firearm.

1. Point the firearm in a safe direction.
2. Put the safety mechanism in the **S-SAFE** position.
3. Turn the key switch to the **OFF/DISABLED (O)** position.
4. Raise the bolt handle.
5. Pull the bolt handle all the way back.
6. Push the bolt stop release. See Picture 8 on page 10.
7. As you push the bolt stop release, slide the bolt from the firearm.

Firearm Assembly and Disassembly

TO DISASSEMBLE:

WARNING: Check the chamber and magazine to make sure there are no cartridges in the firearm.
NEVER attempt to assemble or disassemble the bolt assembly on a loaded firearm.

1. Point the firearm in a safe direction.
2. Put the safety mechanism in the **S-SAFE** position.
3. Turn the key switch to the **OFF/DISABLED (O)** position.
4. Remove the bolt assembly. See instructions on this page.
5. Turn the rifle upside down.
6. Remove the screws from the trigger guard. See Picture 9.
7. Carefully lift the stock away from the action.

TO ASSEMBLE:

1. Put the magazine into the magazine recess in the receiver.
2. With the trigger guard removed, replace the stock assembly, carefully aligning the action's barrel lug with the lug cut in the stock.

NOTE: To prevent damage to the mating electrical connectors when reassembling the stock to the action, it's very important to align the action's barrel lug with the lug cut in the stock and gently squeeze the connector's edge (light finger pressure only). If the action's barrel lug will not align with the lug cut in the stock it will misalign the connectors on the trigger assembly and the stock, possibly damaging the connectors. If more than finger pressure is required to separate the action and the stock together, it is an indication that the mating connectors are misaligned and this pressure could damage the mating connectors.

3. Gently squeeze the action to the stock. The action is fully seated in the stock when the rear end of the receiver is resting completely against the bedding block in the stock.
4. Assemble the trigger guard to the stock.
5. Replace and tighten trigger guard screws.

WARNING: Before you replace the bolt handle, make sure the barrel is free of obstructions.

6. Replace the bolt assembly. See instructions on pages 10 and 11.

The Trigger Assembly

Pulling the trigger fires the firearm.

WARNING: Never pull the trigger on the trigger test, and until you are going to fire the firearm.

TRIGGER ADJUSTMENT:

The trigger of your Model 700™ Etron X™ rifle has been preset at the factory in conformity with industry guidelines to have a trigger pull force of at least 3 pounds. However, for competition targets, it is suggested to idle from a secure stationary rest in a controlled environment. The trigger pull force can be adjusted downward by the user or a qualified gunsmith using the procedure set forth below.

WARNING: Adjustment of the trigger pull force in this rifle below 3 pounds since it can be used for a variety of shooting disciplines and targets in a safe manner only in a controlled environment. If ever used for any other purpose, including use in the field, the trigger pull force on your rifle should never be reduced to less than 2 pounds. Never shoot a target more than 100 yards away regardless of the amount of trigger pull force. **ALWAYS** use the methods of your rifle when in a safe direction to avoid injury or death caused by an uncontrolled discharge.

WARNING: Only the trigger pull force is adjustable. For safety's sake, **NEVER** adjust any other part of the trigger assembly or rifle.

TO ADJUST TRIGGER PULL FORCE:

WARNING: With the safety mechanism in the S-SAFE position, check the magazine and bolt handle positions to make sure there are no cartridges in the rifle. **NEVER** attempt to adjust the trigger pull force unless it is needed. The following steps must be followed:

1. Disassemble the firearm. See Instructions on page 11.
2. Remove the magazine from the magazine access in the bottom of the receiver.
3. Insert 1/16" hex key wrench into the trigger adjustment screw. See Picture 10.
4. Turning the trigger pull adjusting screw counterclockwise will increase the trigger pull force. Turning the trigger pull adjusting screw clockwise will decrease the trigger pull force.
5. Pull and release the trigger several times after each adjustment to reseat the trigger pull force spring.
6. Check the trigger pull force with a force gauge or scale weight. An audible click can be heard from the trigger assembly when the trigger is pulled. The force measured when the click is heard is the trigger pull force.
7. Repeat step 6 several times to ensure the proper trigger pull force is maintained.

WARNING: If either trigger pull weight or the magazine is inserted, all the while, the bolt handle is held in the receiver for safety. Do not use your rifle if the trigger pull force is not as required.

8. Reassemble the firearm. See Instructions on page 11.

WARNING: Be sure to note if you have adjusted the trigger pull force below 3 pounds when you store your rifle for any period of time. If you expect at any time to use your Model 700 Etron X rifle to use the rifle for anything other than its intended purpose, such as hunting or sport shooting, and it is controlled environment, you should readjust the trigger pull force to the required standards.

The Barrel

The inside of the barrel must be clean and free of obstructions.

WARNING: Check the chamber area before you make sure there are no cartridges in the chamber.

I. TO CHECK THE INSIDE OF THE BARREL:

1. Point the firearm in a safe direction.
2. Put the safety mechanism in the S-SAFE position.
3. Turn the key switch to the OFF/DISABLED (0) position.
4. Raise the bolt handle.
5. Pull the bolt all the way back.
6. Remove any ammunition from the chamber and magazine. See page 14.
7. Remove the bolt. See page 11.
8. Look through the inside of the barrel from the chamber end to the muzzle. See Picture 1 on page 7.

II. TO REMOVE OBJECT FROM INSIDE THE BARREL:

1. Use the correct size cleaning rod.
2. Push the cleaning rod from the chamber end all the way through the barrel until the rod comes out of the muzzle.
3. If an object can not be easily pushed out of the barrel with a cleaning rod, return the firearm to a gunsmith or a REMINGTON® RECOMMENDED GUNSMITH.

WARNING: NEVER try to remove an object from the barrel by loading another cartridge there. This may cause the barrel to burst or a cartridge case to rupture and cause serious injury or death.

III. TO CLEAN THE BARREL, FOLLOW THE INSTRUCTIONS SHOWN ON PAGE 16.

To Load the Firearm

Before loading the firearm, make sure the inside of the barrel is free of dirt or other obstructions.

I. TO LOAD ONE CARTRIDGE ONLY:

WARNING: Use Remington® ENFORCER® ammunition for this. Always use one cartridge at a time when loading the firearm.

1. Point the firearm in a safe direction.
2. Put the safety mechanism in the **S-SAFE** position.
3. Turn the key switch to the **OFF/DISABLED (0)** position.
4. Raise the bolt handle.
5. Pull the bolt handle all the way back.
6. Put one cartridge on the magazine loader or in the chamber. See Picture 11.
7. Slide the bolt handle forward, then push the bolt handle down to lock the cartridge into the chamber.

THE FIREARM IS NOW LOADED.

8. Turn the key switch to the **ON/ENABLED (1)** position.
9. To fire the firearm, put the safety mechanism into the **F-FIRE** position. The LED will turn **ON** solid when the firearm is ready to fire.

THE FIREARM IS READY TO FIRE.

NOTE: If the firearm is not fired within approximately 30 minutes, the system will put itself in a low power consumption mode. To reactivate the system:

1. Point the firearm in a safe direction.
2. Move the safety mechanism to the **S-SAFE** position.
3. Put the safety mechanism to the **F-FIRE** position.
4. When the LED turns **ON** solid, **THE FIREARM IS AGAIN READY TO FIRE.**

II. TO LOAD THE CHAMBER MAGAZINE:

WARNING: Use Remington® ENFORCER® ammunition only. Always check the cartridge for correct orientation before loading the firearm.

1. Point the firearm in a safe direction.
2. Put the safety mechanism in the **S-SAFE** position.
3. Turn the key switch to the **OFF/DISABLED (0)** position.
4. Raise the bolt handle.
5. Pull the bolt handle all the way back.

SPECIAL NOTICE

Model 710, 2015XLT, 243W, 270W, 300W
Use after cartridges which are chambered
in the Model 300, 15, 220, 300 LT
is a semi-inert cartridge. You must
be sure you do not accidentally
load the bolt after the cartridge is away
from the barrel. The cartridge is now

6. Push four cartridges of the correct caliber, one at a time, into the magazine. If the firearm is a .357 magnum, you can only load three cartridges. If the firearm is a .17, .222 or .223 caliber, the magazine will hold five cartridges. Keep the outliers aligned toward the chamber. See Picture 11 on page 13.

7. Put one cartridge into the chamber.
8. Use your fingers to push the cartridges in the magazine all the way down. Slowly slide the bolt assembly forward, so that the bolt slices over the tops of the cartridges in the magazine.

9. Push the bolt handle down.

THE CHAMBER AND MAGAZINE ARE NOW FULLY LOADED.

10. Turn the key switch to the **ON/ENABLED (I)** position.

11. If the firearm has the safety mechanism in the **F-FIRE** position.

12. When the **LED** turns **ON** solid, THE FIREARM IS READY TO FIRE.

NOTE: If the firearm is not fired within approximately 20 minutes, the system will automatically go into power down mode. To reactivate the system:

1. Point the firearm in a safe direction.
2. Move the safety mechanism to the **S-SAFE** position.
3. Put the safety mechanism to the **F-FIRE** position.
4. When the **LED** turns **ON** solid, THE FIREARM IS AGAIN READY TO FIRE.

To Unload the Firearm

WARNING: Unload your firearm whenever you are not shooting it.

1. Point the firearm in a safe direction.
2. Put the safety mechanism in the **S-SAFE** position.
3. Turn the key switch to the **OFF/DISABLED (O)** position.
4. Release the bolt handle.
5. Put one hand over the top of the ejection port.
6. Slowly pull the bolt handle back with your other hand to remove the cartridge from the chamber.
7. Hold cartridge and remove it from the firearm.
8. Put your hand under the floor plate.
9. Push the floor plate latch to release the floor plate. See Picture 12. The magazine spring and follower will be released from the magazine.
10. Remove released cartridges.
11. Push in the magazine follower, then close the floor plate.

WARNING: Check the chamber and the magazine to make sure there are no cartridges in the firearm.

Lubrication and Maintenance

Over-lubrication should be avoided. All firearms manufacturers recommend the use of Remington® Oil. Other oils and lubricants may have conductive properties that may interfere with the operation of the firearm. A tube of Remington® Oil helps to prevent rust and corrosion.

When the firearm is to be stored, it should be thoroughly oiled. When in storage outside storage areas should be occasionally wiped with a light coat of Remington® Oil. Remington also recommends that the battery be removed from the firearm when the firearm is stored for extended periods of time (See instructions on page 10).

When the firearm is to be used again after storage, all excess lubrication must be removed. The chamber, barrel, bore, and all surfaces must be thoroughly wiped dry. Reinstall the battery in the firearm (see instructions on page 10).

NOTE: Remington Remington® Oil is available from your local dealer. If your dealer is out of stock, ask them to order Remington® Oil from their Remington distributor.

TO CLEAN THE BARREL:

WARNING: Check the chamber and the magazine to make sure there are no cartridges in the firearm. Never load or clean a loaded firearm.

NOTE: Remington® recommends that chlorinated solvents **NOT** be used to clean this firearm.

1. Use the equipment provided in a good cleaning kit. For recommendations, see your Remington Authorized Gunsmith.
2. Point the muzzle of the firearm in a safe direction.
3. Put the safety mechanism in the **S-SAFE** position.
4. Turn the key to the **OFF/DISABLED (0)** position.
5. Remove the bolt assembly. See instructions on page 11.
6. Select the proper caliber cleaning brush and attach the brush to the cleaning tool.
7. Put the cleaning brush into the gun cleaning solvent.

NOTE: The barrel should lay horizontally with the ejection port facing down during cleaning. Always clean the barrel from the chamber end to the muzzle.

8. Push the cleaning brush through the barrel several times.
9. Remove brush from tool, attach it with cleaning patch and push through the bore.
10. Repeat several times using a new cleaning patch each time, until the patch is not dirty.
11. Push a clean patch saturated with Rem™ Oil through the barrel.
12. Push a clean, dry patch through the barrel to remove excess lubricant.
13. Apply a thin coat of Rem™ Oil to the outside of the barrel with a soft cloth.
14. After cleaning the barrel, clean the receiver and the trigger assembly.

WARNING: This firearm should be checked periodically by Remington Arms Company, Inc. or a REMINGTON RECOMMENDED GUNSMITH. This will ensure proper maintenance, safety, necessary replacement of parts, or damaged parts.

TO CLEAN THE RECEIVER AND TRIGGER ASSEMBLY:

WARNING: Check the chamber and the magazine to make sure there are no cartridges in the firearm.

1. Disassemble the firearm. See instructions on page 11.

NOTE: Clean the receiver and trigger assembly as a unit with Rem™ Oil.

2. Spray the receiver and the one point of the trigger assembly with Rem™ Oil. See Picture 13. Let stand for 15 minutes. Spray again to wash off the components. Shake off any excess lubricant.

WARNING: Please use only a non-reactive solvent. Inherent properties of some solvents may damage and/or disintegrate certain parts of your firearm.

TO ASSEMBLE:

1. Reassemble the firearm. See instructions on page 11.

WARNING: After cleaning the trigger assembly, check the receiver and magazine to make sure there are no cartridges in the firearm. Pull the trigger to make sure the hammer or trigger is pulled. If the trigger is held or fired when the trigger is pulled, contact your distributor, dealer, or a REMINGTON RECOMMENDED GUNSMITH.

CLEANING FREQUENCY:

1. Before and after long-term storage.
2. When the rifle has been subjected to adverse conditions such as shooting in the rain, snow, sand or saltwater areas.
3. When the rifle is exposed to dirty conditions such as shooting on the ground outdoors, being dropped in the mud, etc.

NOTE: While the stainless steel versions of the Model 700™ Rifle have been designed and manufactured to provide improved corrosion protection, only proper care will keep your firearm in good operating condition and retain its appearance. After extensive use, the protective coating on plated parts may be worn sufficiently to reduce corrosion protection. Such worn parts should be replaced to assure the integrity of the corrosion protection.

WARNING: After each use, follow the instructions on page 10 for cleaning and lubricating the bolt assembly. If the bolt assembly is left in the firearm, it must be thoroughly cleaned, dried and lubed as soon as possible. To dry the stock, remove the action from the stock and remove the recoil pad and battery from the stock. Gently blow air or a compressed air gun into the receiver tube. Make sure the parts are completely dry before reassembling the bolt assembly. Keep the bolt assembly clean and dry before re-installing the battery, recoil pad and action. In case of saltwater immersion, remove all parts and freshwater them dry, then air dry before reassembly. If the bolt assembly is left in the gun, contact Remington® for service. Failure to do so may result in serious personal injury or death to you or others.

Instructions for Cleaning the Bolt Assembly

TO DISASSEMBLE THE BOLT ASSEMBLY:

WARNING: Check the chamber and magazine to make sure there are no cartridges in the firearm.

1. Point the firearm in a safe direction.
2. Put the safety mechanism in the **S-SAFE** position.
3. Turn the key switch to the **OFF/DISABLED (0)** position.
4. Remove the bolt assembly from the firearm. See instructions on page 11.
5. Pull rearward on the bolt plug detent with your thumb. See Picture 14.
6. The bolt plug is attached to the bolt with left-handed threads. Rotate the bolt plug clockwise and unscrew it from the bolt.
7. Slide the firing pin assembly from the bolt.
8. Pull the firing pin contact assembly rearward off of the firing pin insulator from the end of the firing pin. See Picture 15.
9. Clean all parts with gun cleaning solvent. Dry with a clean cloth.

NOTE: Remington® recommends that chlorinated solvents **NOT** be used to clean this firearm.

10. Apply a thin coat of Rem™ Oil.

TO ASSEMBLE:

WARNING: Check the chamber and the magazine to make sure there are no cartridges in the firearm.

NEVER attempt to assemble the bolt assembly on a loaded firearm.

1. Put the firing pin contact assembly on the firing pin with the short portion of the contact pointing toward the rear of the firing pin. Make sure the firing pin insulator is still attached to the firing pin. See Picture 16.
2. Slide the firing pin assembly into the rear of the bolt, trapping the firing pin contact into the slot in the rear of the bolt. See Picture 16.
3. Insert the bolt plug into the rear of the bolt, turning it clockwise to tighten until the bolt plug detent snaps into the small notch at the rear of the bolt. See Picture 17. The bolt is now assembled.

NOTE: If the bolt plug is turned past the small notch, the bolt plug will fall in the receiver when the bolt is assembled to the firearm.

4. Assemble the bolt assembly into the firearm. See instructions on page 10.

How to Obtain Parts and Service From Remington®

TO ORDER PARTS:

Many Remington Dealers and Authorized Repair Centers carry a full line of parts. Please check with them first before ordering parts.

To expedite your PARTS order or request REPAIR SERVICE visit our Web site at www.remington.com. Details and instructions are provided along with parts and/or service order forms. You may also contact Remington by calling our toll free customer service number, 1-800-243-9700, Mon. Fri., 9:00 AM - 5:00 PM Eastern time.

1. Fax completed order form (obtainable from the Web site) to 1-336-548-7801.
2. To order by phone without the order form call 1-877-ETRONX1.

Please have the following information ready before you call.

- Firearm model and serial number.
- Part description and quantity. Part descriptions can be found on the parts listing page in this manual.
- Your complete mailing address (P.O. Box and street address), including zip code. Daytime telephone number and e-mail address.
- Method of payment: MasterCard, VISA, Amex or Discover card number and expiration date. Prepayment may be made by check or money order. A quote may be made to you over the phone. (Sorry, no C.O.D.s.)

WARNING: USE ONLY REMINGTON ETRONX PARTS IN REMINGTON FIREARMS.

NOTE: SOME PARTS MAY BE RESTRICTED. See parts list for details. Owners manuals and instruction books may be requested via our Web site at www.remington.com or by calling 1-877-ETRONX1.

REPAIR SERVICES

- I. To obtain repair information on your Model 700™ EtronX® firearm, visit our Web site at www.remington.com and select "Support" "on "Ordering Services."

Print the "Repair Order" provided and package with the firearm.

- Record the serial number of your firearm before sending it to us.
- Pack your firearm for safety and to prevent further damage in shipping and handling. Preferably, ship in a firearm box.
- Remove all accessories from the firearm to prevent loss or damage.
- Enclose a letter with the firearm detailing the serial number along with a full description of the problem. Be sure to include your full name and address (P.O. Box and street address), including zip code, daytime telephone number and e-mail address.
- Ship your firearm by either United Parcel Service (UPS) or First Class Mail (US Post Office). Remington is not responsible for damage or loss during shipment, so you may elect to purchase insurance from your carrier.

Ship to:

Remington Arms Company, Inc.
Arms Service Department ETRONX
14 Hollister Ave.
Ilion, NY 13357

TRANSPORTATION OF FIREARMS IS NOT PERMITTED IN YOUR STATE OR IN
THE STATE WHERE YOU PURCHASED THE FIREARM. THIS IS A VIOLATION OF FEDERAL LAW.
IF POSSIBLE, YOU MUST SEND SPENT SHELLS. PLEASE READ THEM IN
A FIREARM'S INSTRUCTION BOOK AND INCLUDE NAME, ADDRESS (WITH ZIP CODE),
THE FIREARM'S MODEL AND SERIAL NUMBER OF YOUR FIREARM.

- EtronX firearms sent to Remington Arms Co., Inc., will be given priority attention in order to provide you with the most effective and efficient service possible.

TROUBLESHOOTING GUIDE

PROBLEM	POSSIBLE CAUSES	POSSIBLE SOLUTIONS
LED flashes 1 time.	• Low battery voltage. • Battery is dead.	• Replace battery. • Replace battery.
LED flashes 2 times.	• Key switch in the OFF/DISABLED (0) position when safety mechanism moved from the S-SAFE to F-FIRE position.	• Move safety mechanism from F-FIRE back to S-SAFE , turn key switch to ON/ENABLE (1) . Move safety mechanism back to the F-FIRE position.
LED flashes 3 times.		
LED flashes 4 times.	• Trigger pin lock when safety mechanism was moved from S-SAFE to F-FIRE .	• Cycle safety mechanism from F-FIRE to S-SAFE and then back to F-FIRE with your finger off the trigger. • Check for and resolve any binding of the trigger between moving components such as trigger guard. • Trigger switch is damaged. Factory service is required.
LED flashes 5 times.	• Battery was installed with the safety mechanism in the F-FIRE position.	• Cycle safety mechanism from F-FIRE to S-SAFE and then back to F-FIRE with your finger off the trigger.
LED flashes 6, 7, 8, 9, 10 or 11 times.	• Malfunction in the on-board electronics.	• Factory service is required. Do not attempt to use your firearm. Please note the number of flashes in the letter of explanation accompanying the firearm when it's returned for service.
Cartridge chambered but LED does not illuminate.	• Safety mechanism in S-SAFE position. • No battery in the firearm.	• Move safety mechanism to F-FIRE position. • Unload the firearm following the instructions on page 14. Install the battery following the instructions on page 10.
	• Firing pin is bound rearward.	• Firing pin is bound rearward. Unload the firearm following the instructions on page 14. Disassemble the bolt following the instructions on page 16 and verify the firing pin moves freely. If it does not, contact Remington® for service, noting the condition in the letter of explanation accompanying the firearm when it's returned for service.
	• Cartridge's primer contact is misaligned with the firing pin.	• Cartridge's primer contact is misaligned with the firing pin. Replace with a new cartridge.
	• Cartridge's primer contact is obstructed.	• Cartridge's primer contact is obstructed. Replace with a new cartridge.

WARNING: Before field stripping, check the chamber and the magazine to make sure there are no cartridges in the firearm.

A WORD ON THE MAINTENANCE AND CARE OF YOUR REMINGTON FIREARM

Don't Alter or Modify Your Gun and Have it Serviced Regularly.
Your firearm has been designed to operate according to certain factory specifications. You jeopardize your safety and that of others around you by attempting to alter its trigger, mechanical safety or other mechanisms. So never alter or modify your firearm in any way.

Like any mechanical device, a firearm is subject to wear. It must be maintained and periodically serviced to assure optimum safety and performance. Only a qualified service facility should service, repair or modify your Remington® firearm. Consult your instruction book for instructions on how to send your firearm to the factory or to the location of the nearest Remington representative. Remington recommends that you have your firearm professionally serviced annually. You should also have your firearm professionally serviced after prolonged storage, or if there is ever any question concerning the proper functioning characteristics of your firearm.

Proper cleaning and lubrication are also important to firearm maintenance and are necessary to assure accuracy, safety and reliability. Before cleaning, always make sure that your gun is completely unloaded. And always clean the barrel from the chamber end to the muzzle when possible.
