Subject: Online Course - DONE

I'm done.

The problem you're having accessing the course may be that you don't have the Macromedia viewer required to display the course on you computer. When you start the course, it automatically detects whether or not you have the proper driver. If you don't have the driver - game over.

I noticed what I believe is an error on the sixth commandment page. The safety on a Model 700 cannot be moved to the ON or SAFE position when the firing pin is down or fired. The bolt handle must be lifted to cock the firing pin and move the firing pin head backward so that the sear can rise and then be lifted by the safety. Lifting the bolt handle opens the action before the safety is put to the SAFE position.

I hope this proves that I was paying attention.....
